

CHEMWERTH

Short Facts

Country/Region

Woodbridge, CT (US)

Profile

ChemWerth is a full service generic drug development and supply company providing high quality Active Pharmaceutical Ingredients to regulated markets worldwide.

Requirements

SharePoint Online and Office 365 needs to be integrated with local systems and line-of-business applications.

Solution

Codeless data synchronization using the Layer2 Cloud Connector.

Benefits

- Codeless data integration with no touch of the connected systems lowers project risks and costs.
- Secure data transfer directly from local network. No 3rd party involved.
- Stable synchronization architecture with low complexity. Users are

Layer2 Cloud Connector helps ChemWerth to integrate the Microsoft Office 365 Cloud

„The Cloud Connector executed all of our SQL statements and loaded the returned data into SharePoint Online flawlessly every time. Period. If there was an error, it was our error. The connector’s interface is easy to understand and use. Anyone familiar with utilities in the Microsoft stack will be productive immediately.“

Barry Noble, SYNEV / ChemWerth

Microsoft Office 365 can reduce costs, increase organizational capacity, and foster better team collaboration. To increase the benefits and the user adoption of the Microsoft Cloud it is a typical requirement to quickly integrate these new services with the existing corporate or organizational IT. Even with the rise of cloud-based services, for most customers the IT investments they have made, and the systems that their business rely on, will remain as their strategic resources for years to come. That’s why the Layer2 Cloud Connector does not only support codeless cloud-to-cloud SharePoint and Office 365 integration, but also hybrid cloud-to-on-premises integration and synchronization scenarios, complementing currently existing IT infrastructures like local SharePoint, SQL databases, Exchange, ERP/CRM, Excel or XML file content or even file share synchronization.

Layer2 Cloud Connector quickly integrated ChemWert’s Sage 300 ERP line-of-business application with the Microsoft Cloud

“Simply put we’re creating content storage for documents associated with Sage 300 ERP (AccPac) transactions. Microsoft Office 365 SharePoint libraries will store documents associated with Customer Orders, Vendor Purchases and

working with the cloud only, not cross-system.

- Access to synced local ERP data at any time, from anywhere and with any device.
- Increased benefits and user adoption of the new Microsoft cloud-based services.

Hardware / Software

- Microsoft Office 365
- Microsoft SharePoint Online

Product Shipments. SharePoint document sets are automatically created when Sage transactions create records in the AccPac header tables. SharePoint workflows interact with the "connected" header and detail records insuring that the documents properly tagged and quality assured. The Layer2 Cloud Connector is, of course the glue that binds AccPac transactions to SharePoint lists", Barry Noble of SYNEV explains the project requirements at ChemWerth. "The Cloud Connector executed all of our SQL statements and loaded the returned data into SharePoint flawlessly every time. Period. If there was an error, it was our error and in that case, the connector appropriately logged the error with an intelligible message. The Cloud Connector's interface is easy to understand and use. Anyone familiar with utilities in the Microsoft stack will be productive immediately. Our recommendation: The Layer2 Cloud Connector is a no brainer."

About ChemWerth

Established in 1982, ChemWerth is a full service generic drug development and supply company providing high quality Active Pharmaceutical Ingredients to regulated markets worldwide. Through exclusive development and partnerships with API manufacturers, ChemWerth provides expertise in product selection & development; analytical and regulatory services and strong project management to ensure the highest standards of quality.
