

SHORT FACTS

Country/Region

USA/North America

Industry

Pharma

Profile

ChemWerth is a full-service generic-drug development and supply company providing high-quality active pharmaceutical ingredients to regulated markets worldwide.

Requirements

Microsoft SharePoint Online and Office 365 need to be integrated with local systems and line-of-business applications.

Solution

Codeless data synchronization using the Layer2 Cloud Connector.

Benefits

- Codeless data integration without touching the connected systems lowers project risks and costs.
- Secure data transfer directly from local network. No 3rd party involved.
- Stable synchronization architecture with low complexity. Users are working with the cloud only, not cross-system.
- Access to synced local ERP data at any time, from anywhere and with any device.

LAYER2 CLOUD CONNECTOR

Office 365

100+
apps & systems

“ The Layer2 Cloud Connector executed all of our SQL statements and loaded the returned data into SharePoint Online flawlessly each time. Period. If there was an error, it was an error. The connector’s interface is easy to understand and to use. Anyone familiar with utilities in the Microsoft stack will be productive immediately. ”

Barry Nobel, SYNEV/ChemWerth

CASE STUDY

Layer2 Cloud Connector helps ChemWerth to integrate the Microsoft Office 365 Cloud

PROJECT

Microsoft Office 365 can reduce costs, increase organizational capacity, and foster better team collaboration. To increase the benefits and the user adoption of the Microsoft Cloud it is a typical requirement to quickly integrate these new services with the existing corporate or organizational IT. Even with the rise of cloud-based services, for most customers the IT investments they have made – and the systems that their business relies on – will remain as their strategic resources for years to come. That’s why the Layer2 Cloud Connector does not only support codeless cloud-to-cloud SharePoint Online and Office 365 integration, but also hybrid cloud-to-on-premises integration and synchronization scenarios. This fact complements currently existing IT components like the local SharePoint, SQL databases, Exchange, ERP/CRM, Excel or XML file content, or even file share synchronization.

QUICK INTEGRATION OF CHEMWERT’S SAGE 300 ERP LINE-OF-BUSINESS APPLICATION WITH THE MICROSOFT CLOUD

„Simply put, we’re creating content storage for documents associated

with Sage 300 ERP (AccPac) transactions. Microsoft Office 365 SharePoint libraries will store documents associated with customer orders, vendor purchases and product shipments. SharePoint document sets are automatically generated when Sage transactions create records in the AccPac header tables. SharePoint workflows interact with the "connected" header and detail records, ensuring that the documents are properly tagged and quality is assured. The Layer2 Cloud Connector is, of course, the glue that binds AccPac transactions to SharePoint lists," explains Barry Noble of the software services provider SYNEV the ChemWerth project requirements.

"The Layer2 Cloud Connector executed all of our SQL statements and loaded the returned data into SharePoint Online flawlessly every each time. Period. If there was an error, it was our error; and in that case the connector appropriately logged the error with an intelligible message. The Cloud Connector's interface is easy to understand and to use. Anyone familiar with utilities in the Microsoft stack will be productive immediately. Our conclusion: The Layer2 Cloud Connector is a no-brainer."

ABOUT CHEMWERTH

Established in 1982, ChemWerth is a full-service generic-drug development and supply company providing high-quality active pharmaceutical ingredients (API) to regulated markets worldwide. Through exclusive development and partnerships with API manufacturers, ChemWerth provides expertise in product selection and development, comprehensive analytical and regulatory services, and strong project management to ensure the highest standards of quality.

ABOUT SYNEV

SYNEV offers affordable and readily customizable software services. With cloud computing and Microsoft Office 365, SYNEV uses powerful tools to tailor software services to your needs and to convert fixed to variable costs. Plus, the solutions SYNE provides will integrate with your current MS Office desktop applications and will have a familiar look-

ABOUT LAYER2 LEADING SOLUTIONS

Layer2 leading solutions is the market-leading provider of data integration and document synchronization solutions for the Microsoft Cloud, focusing on Office 365, SharePoint, and Azure. Over 200 regional implementation partners and more than 2.500 companies worldwide trust in Layer2 products to keep data and files in sync between 100+ systems and apps in the cloud and on-premises.
